Feedback for Project Number 34 (IMDB 2021 TOP 250 MOVIES DATABASE ANALYSIS)

Feedback Below

What is their topic on?

- *Is the title consistent with the topic?*
- *In other words does the title make sense for the project?*

The project is on "IMDB 2021 TOP 250 MOVIES DATABASE ANALYSIS". The project is very precise and concise as per the topic. The title is very focused on the overall goals of the project, which looks at the overall popularity of movies within this year.

Are the objectives of the project clearly identifiable?

- *What are they wanting to study?*
- *What is the motivation of this project?*
- *What does the presenter hope to accomplish with this project?*

The student is trying to study the overall popularity of movies in the year 2021.The top 250 movies for the year 2021 are being assessed. Being a movie lover herself she is trying to analyze things like cast, production crew, and personal biographies, plot summaries, trivia, ratings, and fan, and critical reviews. The main goal after carrying out this research seems like what genre and the movies within that genre had the most popularity.

What data are used?

- *What website(s) are scraped?*
- *Are other data brought in from outside sources?*
- *If so, what are they and how do they add to the project?*

The student scraped data from the IMDB website and I don't see any secondary sources of data used apart from the IMDB website. There are a total of 250 observations and the variables that are used include rank, title, certificate, genre, rate, director, run time and vote. All these variables help in assesing the defined goals of the project.

What is your overall impression of the project?

Other encouragements/critiques you would like to provide to your colleague in order for them to have a more refined project.

Overall I think this is very well organized project. Everything is very precise and focused on the goals of the project. For future study or carrying on this research I would recommend trying to scrape a bigger data set rather than just using 250 observations. Adding more years to the data set can help getting a bigger data set that can give some more interesting results. Another addition to the project can be adding the synopsis or the reviews to the data set and carry on sentiment analysis to see what sentiments are attributed to certain genres or movies or maybe the cast members or directors.
